

Business Requirements Document (BRD)

Project: VYTAL House – Recovery & Wellness Center

Tagline: Recharge. Recover. Evolve.

Date: June 19, 2026

Prepared by: Chauncey Gardner & Kathy Ha

1. Executive Summary

VYTAL House is a premium, space-inspired recovery and wellness center located in Maryland. The project combines clinical-grade modalities such as hyperbaric oxygen therapy, float therapy, photobiomodulation, cryotherapy and metabolic peptide programs with a membership-based business model. The objective is to deliver accelerated recovery, longevity and high-performance optimization for touring artists, athletes, executives and wellness enthusiasts. This document outlines the functional and non-functional requirements for building the VYTAL House digital ecosystem (website, mobile app, CRM, and back-office tools), the physical facility and supporting operations.

2. Stakeholders

- **Owners:** Chauncey Gardner (CEO) and Kathy Ha (COO) – responsible for vision, funding and strategic decisions.
- **Medical Director & Clinical Staff:** Licensed physicians and nurse practitioners overseeing regulated therapies.
- **Members & Clients:** Touring artists, athletes, entrepreneurs and wellness enthusiasts.
- **Vendors & Partners:** Suppliers of hyperbaric chambers, cryotherapy devices, photobiomodulation systems, peptide pharmacies and wellness products.
- **Investors & Advisors:** Provide capital and strategic guidance.

3. Goals & Objectives

- Create a distinctive, luxury recovery club that fuses medical rigor with atmospheric design inspired by space travel.
- Build recurring revenue through tiered memberships and high-margin therapies including peptides and NAD+ infusions.
- Design a digital platform (web and mobile) that allows frictionless membership registration, service bookings, payment processing and educational content.
- Ensure compliance with medical regulations for IV therapies, peptides and hyperbaric oxygen therapy by contracting a medical director and licensed providers.
- Develop internal systems (CRM, Notion workspace, vendor database) that streamline operations, inventory management, financial reporting and marketing.

4. Scope of Work

The VYTAL House project includes the following workstreams:

Facility Build-Out: Lease negotiation, architectural design, interior fit-out, procurement of hyperbaric chambers, float pods, red-light panels, cryotherapy unit, vacuum fitness pods, IV chairs and laboratory equipment.

Website Development: A public-facing site built with Next.js and Tailwind CSS featuring membership plans, booking engine, educational articles, virtual tour, blog and contact forms.

Mobile Application: A cross-platform app (React Native or Flutter) for members to

manage bookings, view upcoming appointments, track biometrics (HRV, sleep, recovery scores) and receive push notifications.

****CRM & Admin Dashboard:**** A backend portal built with Node.js/NestJS and Prisma to manage members, schedule sessions, process payments via Stripe and generate analytics.

****Notion Workspace:**** A structured internal hub containing the company wiki, project boards, finance trackers, vendor contacts, SOPs and content calendars.

****Vendor & Partner Outreach:**** Development of a vendor contact list with templated email scripts to request pricing, samples and partnership opportunities.

5. Functional Requirements

5.1 Website

- ****Membership Registration:**** Prospective members can browse tiered plans (Core, Elite, Black), create an account, sign liability waivers and set up recurring billing.
- ****Online Booking:**** Members can view available time slots for hyperbaric sessions, float therapy, cryotherapy and other services, reserve appointments and manage cancellations.
- ****Educational Content:**** A “Science” section providing articles about hyperbaric oxygen therapy, peptides, NAD+ infusions and red-light therapy with citations to scientific research.
- ****Virtual Tour:**** Interactive floor plan and photo gallery of the facility with room descriptions.
- ****Contact Forms:**** Secure forms for membership inquiries, vendor partnerships and career applications. Forms route submissions to designated email addresses.
- ****Payments:**** Integrate Stripe to support subscription billing, bookings and gift card purchases.
- ****Blog & News:**** Post updates, case studies, recovery tips and event announcements.
- ****Accessibility:**** Ensure ADA compliance with ARIA labels, alt text, keyboard navigation and sufficient colour contrast.

5.2 Mobile App

- ****Authentication:**** Secure login with email/password and social logins (OAuth). Multi-factor authentication for sensitive actions.
- ****Booking Management:**** View upcoming and past bookings, reschedule or cancel appointments, check remaining membership credits.
- ****Health Tracking:**** Integrate with wearables (Apple HealthKit, Google Fit) to display HRV, sleep scores, steps and session data in a dashboard.
- ****Push Notifications:**** Reminders for upcoming appointments, membership renewals, new therapies and educational content.
- ****Community & Resources:**** Access to articles, video tutorials and community forums.
- ****Support Chat:**** In-app messaging with customer service or medical staff (during business hours).

5.3 CRM & Admin Dashboard

- ****Member Management:**** Create, read, update and archive member records; track membership tier, payment status, session history and medical consents.

- **Scheduling:** Configure facility availability, assign rooms and staff, manage waitlists and send automated confirmations.
- **Inventory & Equipment:** Track usage and maintenance schedules for hyperbaric chambers, cryotherapy units, float pods and other equipment.
- **Content Management:** Publish and update web pages, blog posts and FAQ entries via the headless CMS (Sanity or Prismic).
- **Reporting:** Generate revenue reports, membership churn analytics, appointment utilization and product profitability.
- **User Roles & Permissions:** Define roles (admin, clinician, front desk, marketing) with granular permissions.

6. Non-Functional Requirements

- **Design & UX:** The digital experience must reflect the cosmos-inspired aesthetic — dark backgrounds with starfield animations, pastel-tinted content cards and ghost-outline buttons. Typography should be modern with uppercase headers reminiscent of aerospace design.
- **Performance:** Pages should load within 2 seconds on standard broadband. Implement lazy loading and server-side rendering to optimize SEO and speed.
- **Security & Compliance:** Protect personal health information through encryption at rest and in transit, role-based access control and HIPAA compliance. Obtain consent for telehealth services and maintain proper medical documentation.
- **Scalability:** The system should support scaling to multiple locations, tens of thousands of users and additional modalities. Use cloud infrastructure (AWS/Vercel) with auto-scaling.
- **Maintainability:** Use modular code architecture, automated testing and CI/CD pipelines. Document APIs with OpenAPI specifications.

7. Technology Stack

- **Frontend:** Next.js/React with Tailwind CSS for the website; React Native or Flutter for the mobile app.
- **Backend:** Node.js with Express or NestJS, using GraphQL or REST APIs; Prisma or TypeORM for database access.
- **Database:** PostgreSQL for structured data; Redis for caching session data.
- **CMS:** Sanity or Prismic as the headless CMS powering static pages and blog posts.
- **Authentication:** JSON Web Tokens (JWT) with OAuth integration.
- **Payments:** Stripe API for recurring memberships and one-off service payments.
- **Hosting & DevOps:** Vercel for front-end hosting and auto-deployments; AWS or DigitalOcean for back-end services; GitHub Actions for CI/CD pipelines. Use Docker containers and infrastructure-as-code tooling for repeatable environments.

8. Regulatory & Compliance

- **Medical Oversight:** Maintain physician and nurse practitioner oversight for all regulated therapies (peptides, NAD+ infusions, IV drips) in accordance with state and federal regulations.
- **Facility Licensing:** Obtain required health-department approvals for cryotherapy,

hyperbaric oxygen therapy and IV infusions. Comply with OSHA and fire-safety regulations.

- **Data Protection:** Adhere to HIPAA and data-privacy laws, implementing secure storage, audit trails and breach notification procedures.
- **Consent & Documentation:** Require clients to complete informed consent forms and medical questionnaires through the digital platform; securely store documentation for regulatory audits.

9. Implementation Timeline

1. **Lease & Due Diligence (Month 0–1):** Finalize lease negotiations, review zoning and obtain planning approvals.
2. **Medical Structure Setup (Month 0–2):** Engage medical director, nurse practitioner and legal counsel; establish compounding-pharmacy relationships.
3. **Design & Branding (Month 1–3):** Finalize logo, color palette and brand guidelines; produce investor deck and membership brochure.
4. **Facility Design & Construction (Month 2–6):** Complete architectural drawings, secure permits and build the interior.
5. **Equipment Procurement (Month 3–5):** Order hyperbaric chambers, float pods, cryotherapy units, red-light panels, fitness devices, IV chairs and furniture.
6. **Tech Development (Month 2–6):** Develop website and mobile app; set up CMS, CRM and payment integrations; begin testing.
7. **Marketing & Pre-sales (Month 4–6):** Launch landing page, sell founder memberships, and begin influencer partnerships.
8. **Pilot & Training (Month 6–7):** Soft-open the facility to staff and early members; refine operations and collect feedback.
9. **Grand Opening (Month 7):** Host launch event and begin full operations.
10. **Ongoing Operations:** Monitor financial performance, membership retention and customer feedback; iterate on services and marketing.

10. Financial & Projections

Based on similar recovery clubs, a facility of approximately 7 000 SF with membership tiers (Core \$299/month, Elite \$599/month, Black \$1 499/month) and high-margin therapies (peptide & hormone programs, NAD+ infusions, IV drips) could generate roughly \$160 k–\$200 k in monthly revenue. Start-up costs are estimated between \$750 k and \$2 M depending on build-out quality. Long-term profitability depends on achieving membership targets, effective marketing and maintaining compliance.

11. Appendices

- Membership tier descriptions and benefits.
- Equipment specifications and vendor contact list.
- Sample consent forms and SOP templates.
- Brand mood board and design guidelines from the Awesome Design MD repository.
